"Toxic twins: Emergency Management and Flint water"

"Toxic twins: Emergency Management and Flint water"

The *People's Tribune* wants to hear from you! We have covered the Flint water crisis since the water was switched in 2014. We print your stories, with the mission of bringing the movement together to create a vision of a better world and a strategy to achieve it.

The poisoning of the people of Flint, Michigan—especially the children—with lead and other toxins in the water, is just the latest ugly example that shows that this corporate ruling class is unfit to rule. An economic system that won't provide basic necessities like clean and safe water for its people must be and will be overturned and replaced with a system that meets the needs of the people.

To that end, the *People's Tribune* is a publication of those struggling to create such a new economic system. Our pages are open to you, to tell your stories and connect with the movement.

Please reach out to share your story, become a distributor, and learn about discussion groups in your area:
